

Elena Vasquez

Software Engineer — Backend & ML Platform

elena.vasquez@email.example · +1 (512) 555-0167 · Austin, TX

Professional Summary

Backend-focused software engineer with 4 years of Python experience and growing ML platform exposure. Strong FastAPI/Docker skills; limited hands-on LLM fine-tuning but solid data pipeline and API design background. Eager to deepen applied AI work.

Experience

Software Engineer II — DataHarbor Systems (2022 – Present)

- Owned FastAPI services for document upload, metadata storage, and async job queues (Redis + Celery).
- Integrated third-party OCR and embedding APIs; added retries, circuit breakers, and observability (Prometheus).
- Partnered with ML team to productionize batch scoring jobs on Kubernetes; wrote glue code, not model training.

Junior Software Engineer — DataHarbor Systems (2021 – 2022)

- Maintained Python ETL workers for CSV/JSON ingestion.
- Added unit tests and refactored legacy scripts to typed modules.

Software Engineering Intern — CityMesh IoT (Summer 2020)

- Built internal dashboards and REST helpers in Python/Flask.

Skills

Python, FastAPI, Flask, Docker, Kubernetes, Redis, PostgreSQL, pytest, Git, basic PyTorch (coursework), OpenAI API, REST design

Education

- B.S. Software Engineering — University of Texas at Austin, 2021
- Coursera: Deep Learning Specialization (Andrew Ng), 2023

Projects & Portfolio

- Capstone: simple document classifier with scikit-learn + FastAPI wrapper.
- Hobby: chat wrapper around OpenAI API with prompt templates (no fine-tuning).
